Name: _____

Birth Date: _____

Clinical Herbal Medicine is a distinct form of health care that combines modern scientific research with traditional and natural forms of medicine. Therapies used include botanical medicine, nutrition, and lifestyle counseling.

Botanical medicine is a plant-based medicine that involves the use of herbal teas, tinctures, decoctions (strong teas), capsules, and other forms of herbal preparations to assist in maintaining and promoting healthy living.

Individual diets and nutritional supplementation are recommended to address deficiencies, treat disease processes, and promote health.

Mental, Emotional and Lifestyle Counseling are essential to the practice of natural medicine. In almost all cases there is a mental/emotional/spiritual component that needs to be addressed so the body can heal itself.

There are some slight health risks to treatment by Natural Medicine. These include but are not limited to: aggravation of pre-existing symptoms and allergic reactions to supplements or herbs.
